I study language use in online communities, using statistical models and natural language processing, to understand social phenomena such as adoption of innovations and political discourse.

Education

2015–present **Georgia Institute of Technology**, *Ph.D. in Human-Centered Computing*.
Specialization in social computing.
Research interests: natural language processing, sociolinguistics, computational social science.
Advised by Jacob Eisenstein.

2010–2014 **Dartmouth College**, *A.B. Linguistics (cum laude), minor in Computer Science*.
GPA: 3.78 (cum.) 3.90 (major)
Thesis: "African American English syntax in Twitter."
Advised by James Stanford and Sravana Reddy.

Awards

March 2017 **Honorable Mention**, National Science Foundation Graduate Research Fellowship.
Runner-up in annual Graduate Research Fellowship competition. Award includes increased access to supercomputing resources.

August 2016 **Tuition Reimbursement Award**, Pacific Northwest National Laboratory..
Awarded to PhD interns in the National Security Internship Program who demonstrated outstanding performance in their summer research project. Covers one semester of graduate school tuition.

August 2015 **Great Promise Award**, Charles River Analytics.
Awarded to an intern in each company division who shows significant promise as a software engineer.

May 2014 **Academic Achievement Award**, Dartmouth College Linguistics Department.
Awarded to a graduating student who has demonstrated considerable commitment to research in linguistics.

Skills

Programming languages: Java (proficient), Python (proficient), R (intermediate), LaTeX(intermediate), Javascript/d3 (beginner)

Programming libraries: sklearn, statsmodels, pytorch, gensim, nltk, Beautiful Soup, matplotlib, pandas

Natural languages: English (native), French (fluent), Japanese (beginner), Spanish (beginner), Māori (beginner)

Research

Aug 2015 – present **Graduate Research Assistant**, Georgia Tech Computational Linguistics Lab.
- Developing methods to describe and predict language change online.
- Evaluating neural network models for geographic inference.
- Adapting statistical models such as causal inference and survival analysis to computational social science analysis.

Dec 2013 – June 2014 **Undergraduate Research Assistant**, Dartmouth College Linguistics Department.
- Designed regular expressions to extract non-standard sentence patterns (syntax) characteristic of African American English (AAE) in Twitter data.
- Determined correlation between AAE and community-level demographics: e.g. lower percentage AAE in communities with higher median age.
- Provided sociolinguistic evidence for diversity among AAE speakers.

Work

May 2018 – Aug 2018 **PhD Fellow**, Max Planck Institute for Demographic Research.
- Leveraged Facebook advertising API information to assess immigrant assimilation in the US.
- Collected, organized and analyzed large-scale data with statistical models to test hypotheses on immigrant assimilation.
- Engaged with interdisciplinary research team to set up survey for follow-up analysis.

May 2016 – Aug 2016 **PhD Intern**, Pacific Northwest National Laboratory.
- PhD intern through the National Security Internship Program.
- Formulated and tested methods to predict word dynamics over time in social media data.
- Implemented unsupervised clustering and smoothing in Python (sklearn) to group semantically related words.
- Corroborated connection between distributional semantic meaning (measured with word vectors) and frequency dynamics.

Aug 2015 – Dec 2015 **Graduate Teaching Assistant**, Georgia Tech.
- Designed homework assignments that required implementation of AI algorithms in iPython notebooks.
- Developed grading scripts for automated assignment scoring.
- Prepared documentation for assignments and material to help transition the class to an online platform.

June 2014 – Aug 2015 **Software Engineer Intern**, Charles River Analytics.
- Contributed to agent-based social network generation model (in AnyLogic and Java MASON), in collaboration with two scientists.
- Designed pipeline for social network synthesis and analysis, implementing metrics such as the network clustering coefficient and community modularity.
- Extracted parameters from large-scale social media data for network generation model, such as distribution of languages across Twitter users.

Graduate Coursework

- Social Computing
- Design of Online Communities
- Information Visualization
- Natural Language Understanding
- Statistical Methods
- Time Series Analysis

Presentations and posters

2015 E. Stickgold, B. Skarin, I. Stewart, C. Lofdahl. Extending generative models of large scale networks. 24th Conference on Behavior Representation in Modeling and Simulation (BRiMS). Washington, D.C.

2015 I. Stewart. We some young kings: Communities, age, and African American English online. 2015 Annual Meeting of the American Dialect Society. Portland, Oregon.

2014 I. Stewart. Now we stronger than ever: African American syntax on Twitter. 14th Conference of the European Chapter of the Association for Computational Linguistics. Gothenburg, Sweden.

Reviewing

2018 ICWSM, NAACL, EMNLP, W-NUT.

2017 ICWSM, EMNLP, CONLL.

2016 EMNLP.

Service

2018 Co-Chair of Graduate Student Council Travel Fund Committee.

2018 Reviewer for President's Undergraduate Research Awards (PURA) applicants.

Mentoring

2018 Xiaochuang Han (undergraduate): Deep Learning for Geographic Language Modeling.

Interests

- Music making
- Language learning
- Cookie baking
- Letter kerning
