Ian Stewart

PhD student in social computing.

801 Atlantic Drive NW Atlanta, GA 30318 ☑ istewart6@gatech.edu ʾ ianbstewart.github.io

I apply natural language processing and statistical models to understand social behavior in online discussions. I am especially interested in detecting language variation, such as writing style differences, and explaining patterns in language use with social signals, such as audience expectations.

Education

2015–2020 **Georgia Institute of Technology**, Ph.D. in Human-Centered Computing.

(anticipated) Specialization in social computing.

Research interests: natural language processing, sociolinguistics, computational social science. Advised by Jacob Eisenstein and Diyi Yang.

2010–2014 **Dartmouth College**, A.B. Linguistics (cum laude), minor in Computer Science.

GPA: 3.78 (cum.) 3.90 (major)

Thesis: "African American English syntax in Twitter." Advised by James Stanford and Sravana Reddy.

Awards

March 2017 Honorable Mention, NATIONAL SCIENCE FOUNDATION GRADUATE RESEARCH FELLOWSHIP.

Runner-up in annual Graduate Research Fellowship competition. Award includes increased access to supercomputing resources.

August 2016 Tuition Reimbursement Award, Pacific Northwest National Laboratory.

Awarded to PhD interns in the National Security Internship Program who demonstrated outstanding performance in their summer research project. Covers one semester of graduate school tuition.

August 2015 Great Promise Award, Charles River Analytics.

Awarded to an intern in each company division who shows significant promise as a software engineer.

May 2014 Academic Achievement Award, DARTMOUTH COLLEGE LINGUISTICS DEPARTMENT.

Awarded to a graduating student who has demonstrated considerable commitment to research in linguistics.

Skills

Programming Java (proficient), Python (proficient), R (intermediate), LATEX(intermediate), Javascript/d3 languages (beginner)

Programming sklearn, statsmodels, pytorch, gensim, nltk, Beautiful Soup, matplotlib, pandas libraries

Natural English (native), French (fluent), Japanese (beginner), Spanish (beginner), Māori (beginner) languages

Research

Aug 2015 - Graduate Research Assistant, Georgia Tech Computational Linguistics Lab.

present o Developing methods to describe and predict language change in online communities.

- Studying applications of linguistic analysis to real-life situations such as breaking news events.
- Adapting statistical models such as causal inference and survival analysis to computational social science.

- Dec 2013 Undergraduate Research Assistant, Dartmouth College Linguistics Department.
- June 2014 Designed regular expressions to extract non-standard sentence patterns (syntax) characteristic of African American English (AAE) in Twitter data.
 - Determined correlation between AAE and community-level demographics: e.g. lower percentage AAE in communities with higher median age.
 - Provided sociolinguistic evidence for diversity among AAE speakers.

Work

- May 2018 PhD Fellow, Max Planck Institute for Demographic Research.
 - Aug 2018 $\,\,^{\circ}$ Leveraged Facebook advertising API to assess immigrant behavior in the US.
 - Collected, organized and analyzed large-scale data with statistical models to test hypotheses on immigrant assimilation
 - Engaged with interdisciplinary research team to set up survey for follow-up analysis.
- May 2016 PhD Intern, Pacific Northwest National Laboratory.
 - Aug 2016 PhD intern through the National Security Internship Program.
 - o Formulated and tested methods to predict word dynamics over time in social media data.
 - Implemented unsupervised clustering and smoothing to group semantically related words.
 - Corroborated connection between distributional semantic meaning (measured with word vectors) and frequency dynamics.
- Aug 2015 **Graduate Teaching Assistant**, Georgia Tech.
 - Dec 2015 Designed homework assignments that required implementation of Al algorithms in iPython notebooks.
 - Developed grading scripts for automated assignment scoring.
 - Prepared documentation for assignments and material to help transition the class to an online platform.
- June 2014 **Software Engineer Intern**, Charles River Analytics.
 - Aug 2015 Contributed to agent-based social network generation model (in AnyLogic and Java MASON), in collaboration with two scientists.
 - Designed pipeline for social network synthesis and analysis, implementing metrics such as the network clustering coefficient and community modularity.
 - Extracted parameters from large-scale social media data for network generation model, such as distribution of languages across Twitter users.

Graduate Coursework

- Social Computing
- Design of Online Communities
- Information Visualization

- Natural Language Understanding
- Statistical Methods
- Time Series Analysis

Teaching talks

- 2019 Language change tutorial. Updated materials and presented tutorial on behalf of advisor at IC2S2 in Amsterdam.
- 2019 Why do you talk like that? Minority languages and politics. Guest lecture for "Applications of Linguistics" course at Georgia Tech.
- 2018 Language and computers...and society! Guest lecture for "Language and Computers" course at Georgia Tech.
- 2018 Is it social or linguistic? Examining internal factors in language change. Workshop on New Methods in Computational Sociolinguistics. Leiden, Netherlands.

Reviewing

- 2019 ICWSM, NAACL (outstanding reviewer), ACL, Language Change workshop, W-NUT.
- 2018 ICWSM, NAACL, EMNLP, Workshop on Noisy User-generated Text (W-NUT).
- 2017 ICWSM, EMNLP, CoNLL.
- 2016 EMNLP.

Service

- 2019 Co-leader for Human-Centered Computing seminar (weekly discussion for PhD students).
- 2018-2019 Co-Chair of Graduate Student Council Travel Fund Committee.
 - 2018 Reviewer for President's Undergraduate Research Awards (PURA) applicants.

Interests

- Music making

- Cookie baking

- Language learning

- Letter kerning
